Dear Maher Mallem,

We are happy to inform you that your submission titled

The Parameterized Complexity of Scheduling with Precedence Delays: Shuffle Product and Directed Bandwidth

was selected for presentation at IWOCA 2026. Please find the reports at the bottom of this email, and follow the suggestions for the camera-ready version of your paper due April 8, 2026 (instructions for this will be sent in a separate email).

Thanks for your contribution, and we hope to see you in Clermont-Ferrand for IWOCA 2026!

Best regards,
Florent Foucaud and Aline Parreau
PC chairs of IWOCA 2026

TITLE: The Parameterized Complexity of Scheduling with Precedence Delays: Shuffle Product and Directed Bandwidth

----- REVIEW 1 -----

SUBMISSION: 81
TITLE: The Parameterized Complexity of Scheduling with Precedence Delays: Shuffle Product and Directed Bandwidth

----- Overall evaluation -----
The paper presents several new XNLP-complete problems including Shuffle Product and Directed Bandwidth. The former is mostly interesting as a potential elementary problem to reduce from, while the latter was left open and hardness is now proved for restricted classes.

The writing is not polished but mostly understandable. The results are interesting. The authors have me convinced that Shuffle Product is a nice addition to the collection of XNLP-complete problem. As for Directed Bandwidth, I was already aware of it being XNLP (but I agree that it does not appear in the literature). Nonetheless, proving it on arborescences is nice and matches similar results for undirected Bandwidth and `Bipartite Bandwidth'. If the authors
